PRESS START TO CLEAN

CLEANA-SAURUS

Tell your computer to clean itself, in plain English.

Nate Kim · Nate Park · Wesley Chang — CS 4501 MVP Pitch

CLEAN · ORGANIZE · PROTECT

01 · THE PAIN

Everyone has a messy computer. Nobody cleans it.

Your disk is almost full

2,481 files in Downloads. Five copies of the same lecture PDF. An installer you don't remember downloading.

Cleaning it by hand takes hours, and one wrong delete loses something important.

Example based on our team's own Downloads folders

TARGET USER

Anyone fighting storage or file chaos.

Beachhead: college students on 256 GB laptops, full of course files, media, and random downloads.

02 · THE MARKET

People already pay to clean their Macs.

100M+

active Macs (Apple, 2018)

30M+

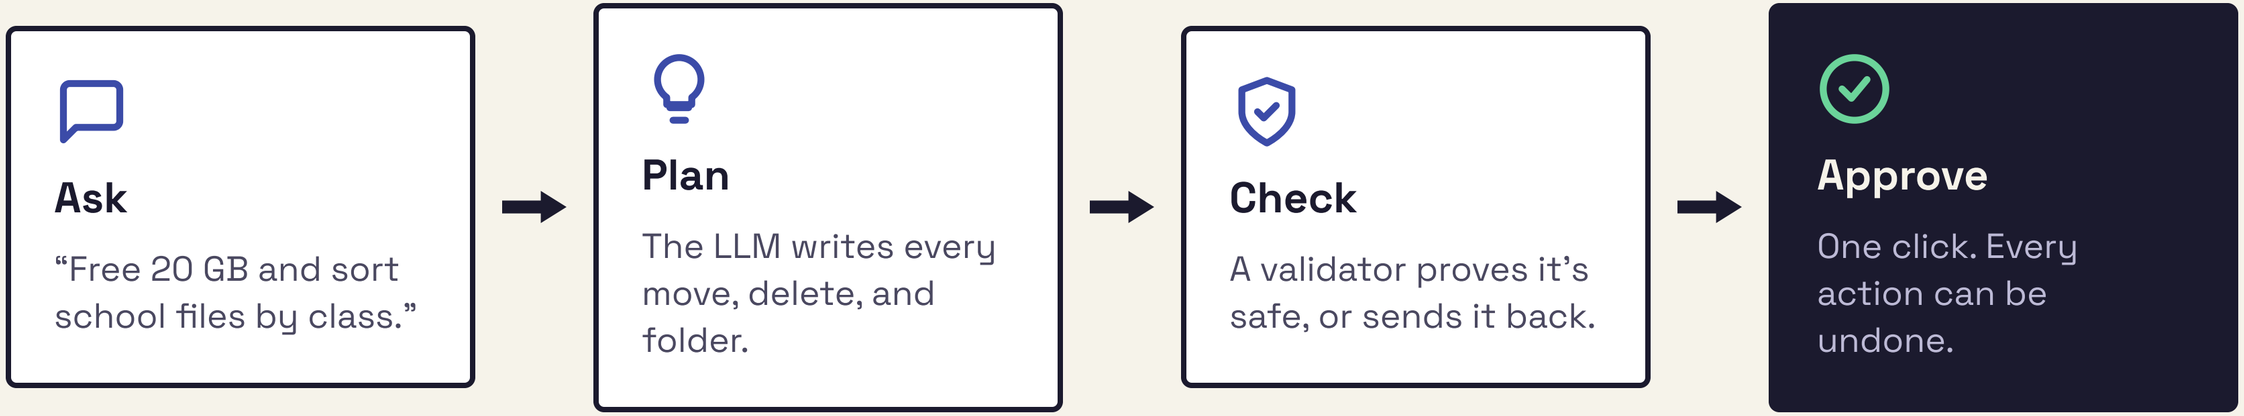

users of MacPaw apps, makers of CleanMyMac

Product	Plain English	Organizes	Malware	You set limits
CleanMyMac	No	No	Yes	Partial
Sparkle (Every)	Yes	Yes	No	No
Hazel	No	Rules	No	Yes
Malwarebytes	No	No	Yes	No
Cleanasaurus	**Yes**	**Yes**	**Yes**	**Yes**

Sources: Apple via TechCrunch (2018); MacPaw (30M+ users across its apps); vendor sites

03 · WHAT IT DOES

You say it. The dino plans it. You approve it.

Cleans duplicates · organizes folders · scans for malware · **learns how you like things stored**

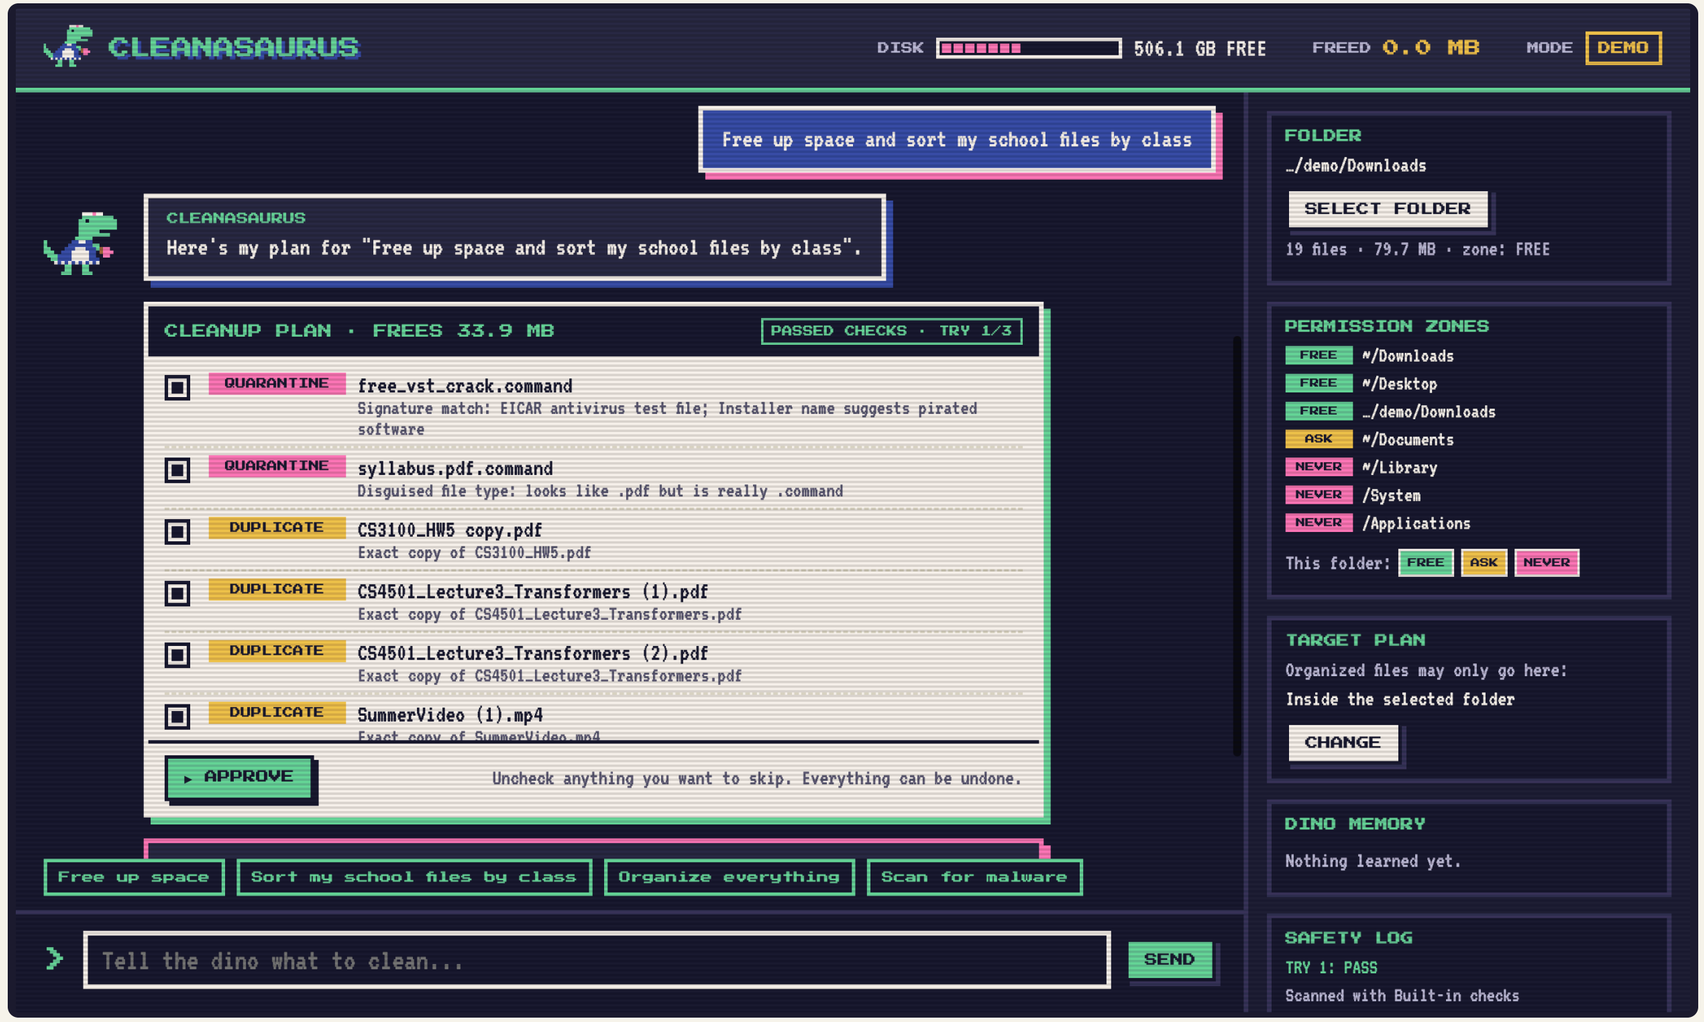

04 · CORE HYPOTHESIS

We believe students with cluttered laptops will let an AI clean and reorganize their files, as long as every plan is checked and previewed first.

≥60% of testers approve and run a full cleanup plan in their first session.

05 · THE MVP

Working app, real screenshot

1

The dino is the chatbot

Ask in plain English.

2

Plan passed checks

Hash-proven duplicates, scanner-flagged malware.

3

You stay in control

Zones, checkboxes, one-click undo.

06 · WHY THESE FEATURES

Build only what tests trust.

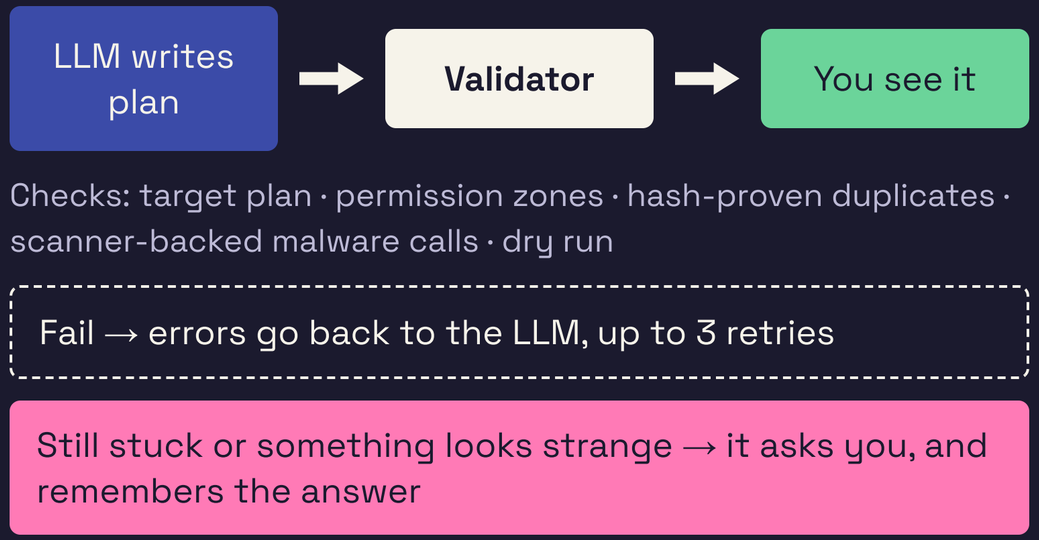

IN THE MVP

- Chat → checked plan for organize + duplicates
- Malware scan on every file it touches
- Permission zones, preview, and undo

LATER

- Windows version
- Always-on background protection
- Near-duplicate photo and version matching

THE SAFETY LOOP

07 · VALIDATION PLAN

15 testers. Their own laptops. Two weeks.

Who

10 friends and classmates plus 5 non-CS students or family, recruited through our group chats and clubs.

Week 1: watch

20-minute in-person session, think-aloud. Three tasks: free 5 GB, sort a folder, review a malware flag.

Week 2: let go

7 days of unsupervised use. Opt-in logs of plans, approvals, retries, questions, and undos. Exit survey.

08 · SUCCESS METRICS

Clear pass. Clear fail.

KPI	PASS	FAIL
Primary: approve and run a full plan in session 1	**≥ 60%**	**< 40%**
Run a second cleanup within 7 days	≥ 40%	< 20%
Executed actions later undone	≤ 10%	> 25%
Unsafe actions reaching a user (LLM safety)	0	Any = stop

In between, we iterate. If the primary KPI fails, we interview every tester on *why* they didn't approve, and fix trust before adding features.
